## Relief from painful spasms

Relaxes the muscles & prevents spasm from occurring

*Facts*

Mefenamic Acid is used as an Analgesic Agent which also provides relief in Primary Dysmenorrhea.

Dicyclomine is still one of the most preferred and frequently prescribed agent among the many antimuscarinics, currently marketed.

Mefenamic Acid inhibits prostaglandin biosynthesis on Uterine muscle, thereby reducing the Uterine Tube contraction and Ovarian Cyclic Adenosine Monophosphate.

Dicyclomine is an Antimuscarinic, Anticholinergic agent and exert a nonspecific, local, direct Spasmolytic (Musculotropic) action on the Smooth Muscle of the GI tract and Uterus.

Gastric irritation may be reduced by taking medication during meals.
